Systema Software Earns Top Claims System Ranking Second Time in a Row in RMIS Review

Achieves Overall “Excellent” Vendor Rating with “Excellent” Support; SIMS Claims Earns “Excellent” Ratings for Architecture, Analytics, and Interfaces with Other Systems

Larkspur, CA – June 16, 2015 – [Systema Software](#), LLC, announced that its flagship [SIMS Claims](#)TM system has achieved the honor of top-ranked [claims administration system](#) for a second time in a row in the RMIS Review.

The 2015 RMIS Review (RR) was written by Dave Tweedy, CMC, RMIS Director at Bickmore, and published by Advisen. Analysis for the RR is conducted every two years. Ratings are based on information provided by vendors via a questionnaire, user feedback, and David Tweedy’s opinion and study of systems. This year, the RR changed its rating procedure. Instead of employing numerical or alpha ratings, it used five qualitative terms: Superior, Excellent, Good, Average, and Below Average.

[Jose Tribuzio](#), CEO of [Systema Software](#), commented: “When it comes to navigating the complex world of risk and [claims management platforms](#), the RMIS Review is the definitive guide. Having [SIMS](#) earn the first-place ranking among [claim systems](#) for a second time in a row is a great honor. Since our company’s inception, we’ve strived to deliver the best [claims solution](#) on the market; this validates that we’re succeeding in this objective. The report provides a testament to the strength of our platform, giving [SIMS](#) “Excellent” ratings in Architecture, Scalability, and Security. We’re thrilled that we also received an overall ‘Excellent’ vendor rating with an ‘Excellent’ score for support.”

“In the RMIS Review, we will hold the top title among [claims systems](#) for four years running,” said [Brian Mack](#), vice president of marketing and sales at [Systema Software](#). “This is a tremendous achievement for our company. The report describes SIMS as a ‘very robust [claims administration solution](#),’ which has been a key priority for us—designing SIMS to be feature-rich and flexible. We also received high ratings on dashboards and analytics, which speaks highly of our business intelligence module, [SIMS Insight](#), which now leverages Power BI. Users can create dashboards on the fly with drag-and-drop capabilities and generate sophisticated reports using natural language, similar to what they might type into a Google search.”
