Systema Software Makes Prestigious San Francisco Business Times' "Fast 100" for the Fourth Time

Continued Growth Driven by Superior Customer Service and
Ongoing Innovation of SIMS Claims with New UI and Stronger BI Capabilities

Larkspur, CA – October 17, 2016 – Systema Software, LLC, a leading provider of claims administration software and services to the insurance industry, today announced it has made the "Fast 100" – *San Francisco Business Times*' list of 100 fastest-growing private companies in the Bay Area. The award acknowledges companies that have achieved impressive revenue growth. Systema Software is recognized for its fourth time, achieved a 133.6% revenue growth rate over the three-year period from 2013 to 2015 and ranked no. 50 on this year's Fast 100.

Jose Tribuzio, CEO of Systema Software, commented on the honor: "Over the years that we've earned a spot on this prestigious list, we've continued to expand our customer base, while retaining all of our existing clients. Our success is the result of delivering superior service, and continuing to innovate SIMS Claims™ to represent the most advanced claims solution on the market. This past year, we incorporated Microsoft Power BI (business intelligence) to deliver sophisticated data mining and predictive analytic capabilities, and we launched a completely new User Interface (UI) for SIMS."

In today's digital society, consumers expect a streamlined UI for their business applications. Many leading companies like Microsoft and Google have refreshed their UIs to stay at the forefront of web-based applications. "We've done the same for our claims software," added Tribuzio. "With the new UI, our clients are able to leverage the same power and robust features of SIMS—but with a sleek new look and feel, and a more intuitive and efficient user experience.

By updating our UI, we're also able to offer new features and benefits, such as browser compatibility, accelerated performance and the ability to run on tablets."

The insurance industry handles an increasing volume of data from traditional sources, such as claims and policies, as well as new sources, such as telematics, wearables and drones. Systema Software strives to meet the industry's data-analysis needs by building out its BI module, SIMS Insight, and by making SIMS increasingly more flexible and configurable, so customers can tailor the system to meet their unique business needs.

"What has always set us apart is our people and our product, but I'd add our attitude," said Tribuzio. "Staying in place is tantamount to lagging behind, so we keep an eye on new trends and emerging technologies, and we're putting new capabilities into production for the benefit of our clients."

About Systema Software
