Systema Software Selected by Salt Lake County

SIMS Claims Chosen for Secure Cloud Solution; Extremely Flexible, Scalable Architecture; Business Intelligence and Superior Support

Larkspur, CA – April 1, 2013 – Systema Software, a leading provider of claims administration software and services to the insurance industry, today announced that Salt Lake County selected SIMS Claims™ as the new claims system within its self-insured workers' compensation, liability, auto, and property programs. Systema Software will host the claims software via its reliable, secure, and high-performing SIMS Cloud environment.

Salt Lake County serves as Utah's valley-wide metropolitan government for 1.1 million people, and a city government for over 160,000 unincorporated residents.

Today, many public entities struggle with inadequate software support and rigid technology platforms, which make it difficult to adapt to new and changing needs. Salt Lake County chose SIMS Claims for its extremely flexible, scalable architecture, which will enable the County to integrate various data sources and interface with other systems in its IT environment. SIMS will also provide a robust set of out-of-the-box features and functions, which will be configured to meet the County's system and business requirements.

Jose Tribuzio, CEO of Systema Software, commented: "We're excited to add the Salt Lake County to our client community. Our staff is committed to delivering the highest level of service and support, so the County can achieve its business objectives successfully. In terms of platform, SIMS is architecturally geared for speed, functionality, and performance. SIMS has a tradition of

empowering clients through an elegant user interface, workflow automation, and document management, enabling them to increase their focus, productivity, and savings."

With SIMS Cloud, the County will have access to the latest version of SIMS Claims without having to make a large upfront IT investment. Systema Software will perform all system maintenance, upgrades, and support, which enables the County to reduce additional costs, outsource key IT services, and leverage solid security. If the County needs additional support, it has the option to leverage Systema staff as a virtual extension of its IT team.

The County's search for a new claims system also included criteria for customizable dashboards and a strong reporting platform—all features found in SIMS. As a result, the County will be able to "slice and dice" information and generate ad hoc reports with ease.

About Systema Software
Systema Software provides flexible, comprehensive solutions and services to the insurance industry. Its flagship product, SIMS Claims, is an innovative, browser-based property and casualty claims administration system. Together, our team of Big 4 consulting and industry veterans, experienced software developers, and project managers deliver an architecturally strong enterprise platform, designed for superior speed, scalability, and performance.
